Forensic histopathology is the use of histology to aid in the identification of disease and injuries in forensic pathology practice. The value of routine microscopy has been challenged in various studies and discussions have taken place in forensic journals about how useful microscopic diagnosis is in medicolegal autopsies.

Black esophagus is a rare medical condition, characterized by a circumferential blackish discoloration of the distal part of the esophageal mucosa, abruptly ending at the gastroesophageal junction. The etiology is multifactorial since patients suffer from multiple comorbidities. While the mortality rate specifically linked to black esophagus is only around 6%, the mortality rate linked to the ...
