In particular, more accurate 2D and 3D FE models of the RVE at the mesoscopic scale have been developed for predicting, by means of a stochastic approach, the variability of the equivalent elastic properties of cork agglomerates at the macroscopic scale, due to the uncertainty involved at the microscopic scale, at different temperatures.

This study proposes an integrated deterministic-stochastic approach to forecast the long-term trajectories of the COVID-19 cases for Italy and Spain. The deterministic component of the daily-cases univariate time-series is assessed by an extended version of the SIR (SIRCX) model, whereas its stochastic component is modeled using an autoregressive (AR) time series model.

Then, a stochastic procedure is applied to determine the tortuosity of the porous media. Since the probability of each path is calculated based on fluid flow rates, the stochastic approach makes it possible to calculate the tortuosity for effective paths, and there is no need for total path determination.

Being able to predict what may happen in the future requires an in-depth understanding of the physical and causal rules that govern the world. A model that is able to do so has a number of appealing applications, from robotic planning to representation learning. However, learning to predict raw future observations, such as frames in a video, is exceedingly challenging—the ambiguous nature of ...

In mathematics, the theory of stochastic processes is considered to be an important contribution to probability theory, and continues to be an active topic of research for both theoretical reasons and applications. The word stochastic is used to describe other terms and objects in mathematics.

The stochastic gradient boosting (SGB) approach may be an attractive alternative to conventional methods for predicting safety accidents because of its superior predictive performance. Therefore, SGB is applied to an early prediction of safety accidents at a construction site in order to examine its applicability to the construction safety domain.
