Anatomy & Physiology Chapter 6-9: The Skeletal System ...

Skeletal System Lessons on the skeletal system (upper limb, lower limb, skull, vertebrae, rib, and sternum bones).

Skeletal System • Anatomy & Function - GetBodySmart

The human skeleton contains 206 known bones and because of its sheer scope, a classification system had to be invented. Typically, bones are classified into four categories by shape: long, short, flat, and irregular. The skeleton is again classified into smaller and more specific groups which we'll discuss in future publications.

Skeletal : Anatomy & Physiology

The Skeletal System. The skeletal system quizzes. There are 206 bones in a typical human body, providing a range of important functions : They provide a framework that supports the body. They protect the organs within the body cavities from mechanical injury. They contain and protect the red bone marrow.
