Boost Asio C Network Programming

Network programming. Even though Boost.Asio can process any kind of data asynchronously, it is mainly used for network programming. This is because Boost.Asio supported network functions long before additional I/O objects were added. Network functions are a perfect use for asynchronous operations because the transmission of data over a network may take a long time, which means acknowledgments and errors may not be available as fast as the functions that send or receive data can execute.

C++ took a step to resolve this issue by introducing boost.asio. It is a cross-platform C++ library for network and low-level I/O programming that provides developers with a consistent asynchronous model using a modern C++ approach. Here's a list of what it offers: Cross platform networking code (code would work on Windows, Linux, etc.)
