Cathodic Protection Methods While there are many geometric variations on how a cathodic protection system can be installed, there are just two basic methods of applying cathodic protection. The first method is commonly called sacrificial anode cathodic protection and uses galvanic anodes to deliver smaller amounts of DC current to the structure.

Cathodic Protection Cable (CPC) is a critical component of that solution. What is Cathodic Protection? Cathodic protection is described as “a technique used to control the corrosion of a metal surface by making it the cathode of an electrochemical cell.” It works by connecting the protected structure to a more easily corroded metal.

Cathodic Protection Cable Helps Safeguard Industrial ...

This article describes the problems encountered and the solutions developed. During attempts to install a deep anode bed to a depth of 500 ft (152 m) for an impressed current cathodic protection (ICCP) system, groundwater flowed out of the drilled hole.

Deep Anode Bed in a Flowing Artesian Aquifer

Other Cathodic Protection engineering services to industry include: Corrosion surveys including soil resistivity, soil analysis, pH measurement. Engineering consultancy. Audit and upgrade of existing Cathodic Protection Systems. Routine monitoring plus repair and remedial work. Training courses on corrosion and Cathodic Protection
