12.2.3.. Figure 12.2.3 – Neuron

Classification by Shape: Unipolar cells have one process that includes both the axon and dendrite. Bipolar cells have two processes, the axon and a dendrite.

12.2 Nervous Tissue - Anatomy & Physiology

1) Neurons - a cell that possesses electrical excitability and can carry an action potential. They provide most of the function of nervous tissue, including: sensing, thinking, remembering, controlling muscles and regulating glands. 2) Neuroglia - support cells for the neurons. They support, nourish and protect the neurons.

Chapter 12 Nervous System Nervous Tissue Flashcards - Cram.com

Nervous System Overview Because the nervous system is quite complex, we will consider its various aspects in several related chapters. In this chapter we focus on the properties of the cells that make up nervous tissue - neurons and neuroglia. In chapters that follow, we will examine: • the spinal cord and spinal nerves (Chapter 13) • the ...
