can now be understood in genetic terms.

Beginning with variation, we now know that traits are controlled by genes and that many genes have at least two forms, or alleles.

developed his theory of evolution, he worked under a serious handicap

- He didn't know how heredity worked
- This lack of knowledge left two big gaps in Darwin's thinking

Evolution Of populations

Flashcards and ...

The process of evolution occurs only in populations and not in individuals. A single individual cannot evolve alone; evolution is the process of changing the gene frequencies within a gene pool. Five forces can cause genetic variation and evolution in a population: mutations, natural selection, genetic drift,
