Congruence In Overlapping Triangles Form

One of the steps in proving that these triangles are congruent is we have to find out if certain side and certain angle match up when we're given certain information. But since we have overlapping triangles, there's information given in the diagram. That is not given to you as a statement.

4.7 Congruence In Overlapping Triangles

When teaching triangle congruence, overlapping triangles appear at some point. I always teach students to draw the triangles separately before making any conclusions. This activity/demonstration helps students create overlapping triangles and separate them to see the triangles individually. First, fold one corner of a piece of paper to form a triangle.

Congruent Triangles. Two triangles are congruent if they are exactly the same size and shape, which means they have the same angle measures and the same side lengths. If we know that all the sides and all the angles are congruent in two triangles, then we know that the two triangles are congruent. <https://study.com/academy/lesson/congruence-in-overlapping-triangles.html> read more.

The SAS (Side-Angle-Side) postulate states that if two sides and the included angle of one triangle are congruent to two sides and the included angle of another triangle, then the triangles are congruent. (The included angle is the angle formed by the two sides.) The following figure illustrates this method. Check out the SAS postulate in action:
