### **The Problem with Modern Diesel Engines - Still Running Strong**

The most common cause of misfiring in any diesel engine is a problem with the fuel injectors. However, this is not the only possible cause of misfire. The problem may be electrical as well. If the injector wiring is not strong enough, that is if it is under 20 Amps, the injectors simply do not have enough power to work properly.

### **Troubleshooting Cummins Diesel Engines**

A basic diesel engine needs only a constant supply of clean fuel, plus air to provide oxygen for combustion. The amount of air needed is easy to under estimate - around one cubic metre per minute is required for every 10hp of engine power.
