2. 3. Last. Your coolant level sensor helps monitor your cooling system. Damage to this sensor may cause it to send inaccurate readings: either that your coolant level is low when it's not, or that there are no problems even when you're low on coolant. If the sensor fails, you may experience reduced fuel efficiency, a coolant level light that won't turn off, or your engine may overheat due to lack of coolant.

I work on a lot of 94' & 95' "B" bodies with LT1 motors and the low coolant sensor is mounted in the overflow tank. I've seen this sensor go bad often, but in this case you have to replace the overflow tank because the sensor is sealed in the tank. Sounds like this sensor is mounted in the radiator and probably the culprit.
