Wooden On Leadership How To Create A Winning Organizaion

Breath malodour is a condition that has health and social implications. The origin of breath malodour problems are related to both systemic and oral conditions. The advice of dental professionals for treatment of this condition occurs with regularity since 90% of breath odor problems emanate from the oral cavity.

Dentaïd Professional - STUDIE

Breath malodour is a condition that has health and social implications. The origin of breath malodour problems are related to both systemic and oral conditions.

Since there is limited research, the authors propose three possible causes for PKU-associated breath malodour: (1) residue from the PS in the oral cavity leads to a temporary change in breath composition (i.e. breath smells like the PS); (2) residue and regular replenishment of sulphur-containing amino acids from the PS (such as cystine and methionine) serve as a substrate for bacterial degradation in the oral cavity resulting in the release of volatile sulphur compounds (VSCs) such as ...

Investigation of paediatric PKU breath malodour, comparing ...

The first step in assessment is an objective measurement of breath odour to determine whether malodour is actually present, because most individuals are poor judges of their own breath odour (Eli et al , 2001). Three objective methods of breath malodour measurement are available viz, gas chromatography, halimetry (sulphide monitoring) and ...

Laryngopharyngeal Reflux Has Negative Effects on Taste and ...

Term used to describe any disagreeable odour of expired air from the mouth. In most cases, it arises from the presence of volatile sulfur compounds (VSCs), diamines, and short-chain fatty acids in the exhaled air. More likely to occur in individuals with oral, dental, and nasopharyngeal disease t...

A nearly equal proportion of males and females reported that bad breath had interfered with their social life or with their work during the previous month (Table 1). Malodour was reported with the highest frequency (68%) during wake up time. In 20-23% of the respondents, malodour was perceived during thirst or hunger.

The Prevalence of Self-Reported Halitosis and Oral Hygiene ...

Main purpose: This paper aimed to confirm a relationship between chronic hypertrophic tonsillitis (CHT) and bad mouth odour. To this end, detailed identification of the microbial flora inhabiting affected tonsils was carried out. The results obtained might be helpful in specifying indications for tonsillectomy. Materials and method: From among 247 patients with clinically diagnosed CHT, 33 ...
