The IB is fine with using the triangle. But you can use your calculator too. Each term in the expansion of  $(a+b)^n$  can be written as  $\binom{n}{r} a^{n-r} b^r$ . Each term is written by incrementally increasing the value of  $r$  from 0 to the value of  $n$ .

For this universe we can then see that when  $t = 5$  for example, we would have a universal expansion scale factor of 28.5. So, there we go - very complicated maths, way beyond IB level, so don't worry if you didn't follow that. And that's just a simplified introduction to some of the maths in cosmology!
