Communications  
communication  
between these  
processes can be seen  
as a method of co-  
operation between  
them. Processes can  
communicate with  
each other through  
both: Shared Memory;  
Message passing

## **Inter Process Communication (IPC) - GeeksforGeeks**

Communication can also be multi-level such as communication between the parent, the child and the grand-child, etc.

# Read Free Interprocess Communications

Communication is achieved by one process writing into the pipe and other reading from the pipe. To achieve the pipe system call, create two files, one to write into the file and another to read from the file.

## **Inter Process Communication - Pipes - Tutorialspoint**

Shared memory is one of the three

Interprocess  
Communications  
interprocess  
communication (IPC)  
mechanisms available  
under Linux and other  
Unix-like systems. The  
other two IPC  
mechanisms are the  
message queues and  
semaphores. In case of  
shared memory, a  
shared memory  
segment is created by  
the kernel and mapped  
to the data segment of  
the address space of a  
requesting process.
