Comparing data of different types may give unexpected results. When comparing a string with a number, JavaScript will convert the string to a number when doing the comparison. An empty string converts to 0. A non-numeric string converts to NaN which is always false.

### JavaScript Comparison and Logical Operators

The JavaScript for/of statement loops through the values of an iterable objects. for/of lets you loop over data structures that are iterable such as Arrays, Strings, Maps, NodeLists, and more. The for/of loop has the following syntax:

### JavaScript for Loop - W3Schools

jQuery is a concise, fast and simple JavaScript library that is used to handle dynamic data or content of a web page. It is getting popular day by day due to its simplicity and extensibility. Unlike other JavaScript libraries like MooTools, Angular, Knockout or TypeScript it is quite simple and features rich library.

### jQuery VS JavaScript - Difference between JQuery and ...

With jQuery, you can associate JavaScript data types (strings, numbers, objects, arrays, events, and functions) with a particular DOM element. The data is stored in an internal indexed jQuery cache JavaScript object. The association between named data and the DOM element is what makes DOM-based data storage and retrieval possible in jQuery.

### DOM-based data storage and retrieval using jQuery

Calling jQuery.data (element) retrieves all of the element's associated values as a JavaScript object. Note that jQuery itself uses this method to store data for internal use, such as event handlers, so do not assume that it contains only data that your own code has stored.

### jQuery.data() | jQuery API Documentation

Well organized and easy to understand Web building tutorials with lots of examples of how to use HTML, CSS, JavaScript, SQL, PHP, Python, Bootstrap, Java and XML.

### JavaScript Operators - W3Schools

JSON is a lightweight data interchange format; JSON is language independent \* JSON is "self-describing" and easy to understand \* The JSON syntax is derived from JavaScript object notation syntax, but the JSON format is text only. Code for reading and generating JSON data can be written in any programming language.
