Download the latest version of JCS. The latest JCS builds are located [HERE](#) if you would like to... **STEP 3:** Get the Required Dependencies. ...

JCS - Getting Started -- Introduction
It is recommended that only disk and remote auxiliaries be used. The lateral caches are functional but not as efficient. The default configuration code above specifies that non-preconfigured caches use the auxiliary cache by the name DC. This cache is defined in the third section of the file; jcs.auxiliary.DC= org.apache.commons.jcs.auxiliary.disk.DiskCacheFactory jcs.auxiliary.DC.attributes= org.apache.commons.jcs.auxiliary.disk.DiskCacheAttributes jcs.auxiliary.DC.attributes.

JCS - Configuring the Local Cache
Java Caching System. JCS is a distributed caching system written in Java. It is intended to speed up applications by providing a means to manage cached data of various dynamic natures. Like any caching system, JCS is most useful for high read, low put applications. Latency times drop sharply and bottlenecks move away from the database in an effectively cached system.

JCS - Java Caching System - Apache Commons

Cache Region Configuration. The following properties apply to any cache region. They can be specified as default values and specified on a region by region basis. There are three types of settings: auxiliary, cache, and element. The cache settings define the memory management for the region. The element settings define default element behavior within the region.

JCS - Cache Region Configuration
To inject a custom event logger, you simply need to implement the org.apache.commons.jcs.engine.logging.behavior.ICacheEventLogger interface and add a couple of lines to the cache.ccf file. During configuration, JCS will look for event loggers configured for each auxiliary. JCS will set any custom properties.

JCS - Cache Event Logging
Java Caching System (JCS) is an open source caching engine released through the Apache Jakarta sub-project. JCS provides in-memory caching and algorithms for selectively removing objects from the cache. It also offers more advanced features, such as, indexed disk caching and support for distributed caches.

This is the official JBoss Cache Users' Guide. Along with its accompanying documents (an FAQ, a tutorial and a whole set of documents on POJO Cache), this is freely available on the JBoss Cache documentation website. When used, JBoss Cache refers to JBoss Cache Core, a tree-structured, clustered, transactional cache.

JBoss Cache Users' Guide
Java Caching System is a distributed caching framework developed in Java. It supports memory and disk cache. JCS is completely configurable through the properties file. It provides mechanism for storing data in the cache, getting data from the cache, removing data from the cache.

Basics of Java Caching System (JCS) | TechNetExperts
Cache nodes can recover from internal faults automatically. Manual fault recovery is also supported. Certain operations (such as backup, restoration, and parameter configuration) in the management zone are not supported during fault recovery. You can contact customer service or perform these operations after cache nodes recover from faults.
