Liferay Portal 4 - Installation Guide

Liferay Portal is one of the most flexible applications on the market today with regard to application server environments. It supports a wide variety of application servers, freeing you to use the Java application server

you think is best. Liferay also scales very well: you can install Liferay Portal on everything from a shared hosting account to a multi-node cluster running a commercial application server and on everything in between.

Introduction to Installation and Setup – Liferay Help Center

Simply select the Ant

tab in your perspective and then click the Ant icon with the + symbol. Note that each directory within Liferay contains its own build.xml file, which Ant reads. When clicking the Ant icon, select the build.xml file within the portaldirectory. Your Ant setup should look like Figure 2.3.

Liferay Portal Setup Guide

Install Java 8. The first step in Liferay 7 installation is to install Java. Since, Liferay 7 is compatible with Java 8 (and higher version) only, you need to install Java 8 first. Liferay took this decision to use all latest features of Java. Also Oracle has announced to stop any further support for Java 7.

To install Liferay Portal, you need more than 300 MB of disk space and at least 1 GB of Random Access Memory (RAM). The application server or servlet container that houses Liferay Portal runs at a port. You should make sure that other applications on your computer are not

using that port. Liferay Portal is written in Java.
