Pythagoras emigrated to southern Italy about 532 bce, apparently to escape Samos's tyrannical rule, and established his ethico-political academy at Croton (now Crotona, Italy). It is difficult to distinguish Pythagoras's teachings from those of his disciples. None of his writings have survived, and Pythagoreans invariably supported their doctrines by indiscriminately citing their master's ...

Pythagoras: A Life Beyond Math and Science | Ancient Origins

The Pythagorean Theorem is a statement in geometry that shows the relationship between the lengths of the sides of a right triangle – a triangle with one 90-degree angle. The right triangle equation is $a^2 + b^2 = c^2$. Being able to find the length of a side, given the lengths of the two other sides makes the Pythagorean Theorem a useful technique for construction and navigation.

Pythagoras's rules seemed every bit as weird to the Greeks as they do to us. During his time, the Greeks spread a joke about a Pythagorean who insisted that he never ate any living thing. After getting caught eating dog meat, the Pythagorean said, "Yes, but [I kill] them first, and so they are still not alive." 5 He Had Rules For Everything

Pythagoras of Samos (c. 570 – c. 495 BC) was an ancient Ionian Greek philosopher and the eponymous founder of Pythagoreanism. His political and religious teachings were well known in Magna Graecia and influenced the philosophies of Plato, Aristotle, and, through them, Western philosophy. Knowledge of his life is clouded by legend, but he appears to have been the son of Mnesarchus, a gem ...

Some visual proofs of Pythagoras' Theorem My favourite proof of the look-and-see variety is on the right. Both diagrams are of the same size square of side $a + b$. Both squares contain the same four identical right-angled triangles in white (so it is white-angled) with sides a , b , c . The left square also has two blue squares with areas a^2 and b^2 whereas the right hand one replaces them with ...

The triple 3 – 4 – 5 is really a ratio 3:4:5, since any multiple of 3 – 4 – 5 will also be a Pythagorean Triple. In fact all right triangles formed by the triple 3 – 4 – 5 will be similar. There is an infinite number of these Pythagorean Triples. 5:12:13 is another example. 6. Example of squares on sides of right triangle:
