In order to give a computational methodology for the dynamic modeling and analysis of the planar multilink mechanism with multiple degrees of freedom and multiple clearances and master the dynamic characteristics of the planar multilink mechanism, the nonlinear dynamic models of the multiclearance hybrid seven-bar mechanism under different clearance numbers, different clearance values, different clearance positions, and different driving velocities are established and analyzed.

A dynamic analysis of rotating functionally gradient (FG) beams is presented for capturing the steady bending deformation by using a novel floating frame reference (FFR) formulation. Usually, the cross section of bending beams should rotate round the point at the neutral axis while centrifugal inertial forces are supposed to act on centroid axis.

In the construction of the dynamic model, vibration displacements are used and the centrifugal force of the carrier is ignored, so it cannot be used under variable and high speed conditions. Wei et al. proposed a comprehensive, fully coupled dynamic model of planetary gears with a flexible shaft, ring gear, and carrier by virtual beam elements. However, this model ignores the centrifugal forces of the planets and carrier, and it is also difficult to use for planetary gears with a complex ...
