nonlinear programming (NLP) is the process of solving an optimization problem where some of the constraints or the objective function are nonlinear. An

optimization problem is one of calculation of the extrema (maxima, minima or stationary points) of an objective function over a set of unknown real variables and conditional to the satisfaction of a system of equalities and ...

Introduction to nonlinear

Download Ebook Nonlinear Programming **optimization**

This course provides an introduction to the theory and methodology of nonlinear programming. The focus will be on engineering and management science applications of nonlinear optimization. Both single and multi-variable as well as unconstrained and constrained problems are addressed.

level textbook on the mathematical theory of nonlinear programming and algorithms for the solution of nonlinear programming problems. In addition to its primary role as a textbook this book will also be of interest to many readers as a reference for definitions and theorems in the theory of nonlinear programming.
